ACCURACY, PRIVACY

MARKET

- Legal review is the costliest, slowest part of disputes/compliance,
- And most AI can't be used because data can't leave the enterprise.

  Minimal human labeling → ORCA auto-labels and structures the rest (even messy, multi-threaded corp. data), with audit-ready accuracy and full reviewability of infrastructure and code.

AUTOMATION

- ORCA is the AI layer that finally brings automation to eDiscovery and investigations
- Without creating data-risk—deployed in-VPC/on-prem, governed by the customer's IAM.
